

Medium Range Hazards Updates

Weather Prediction Center, College Park, MD

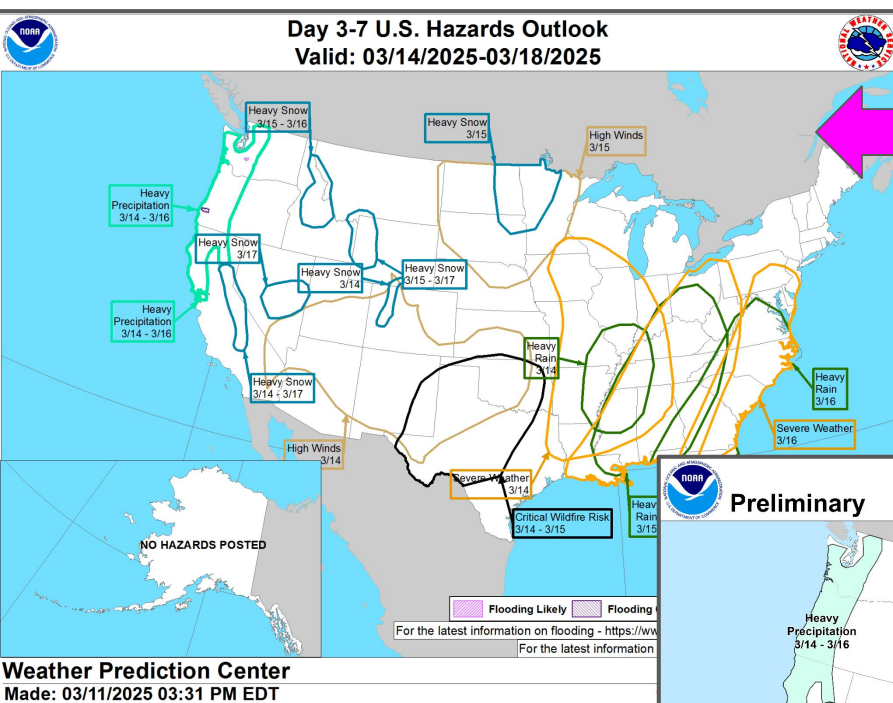

www.wpc.ncep.noaa.gov

On or around June 24, 2025, the Weather Prediction Center will implement a new look and feel to the Medium Range (Days 3-7) National Hazards Map! These changes will improve the quality and readability of the chart, increase visibility, and better support a "Weather Ready Nation"

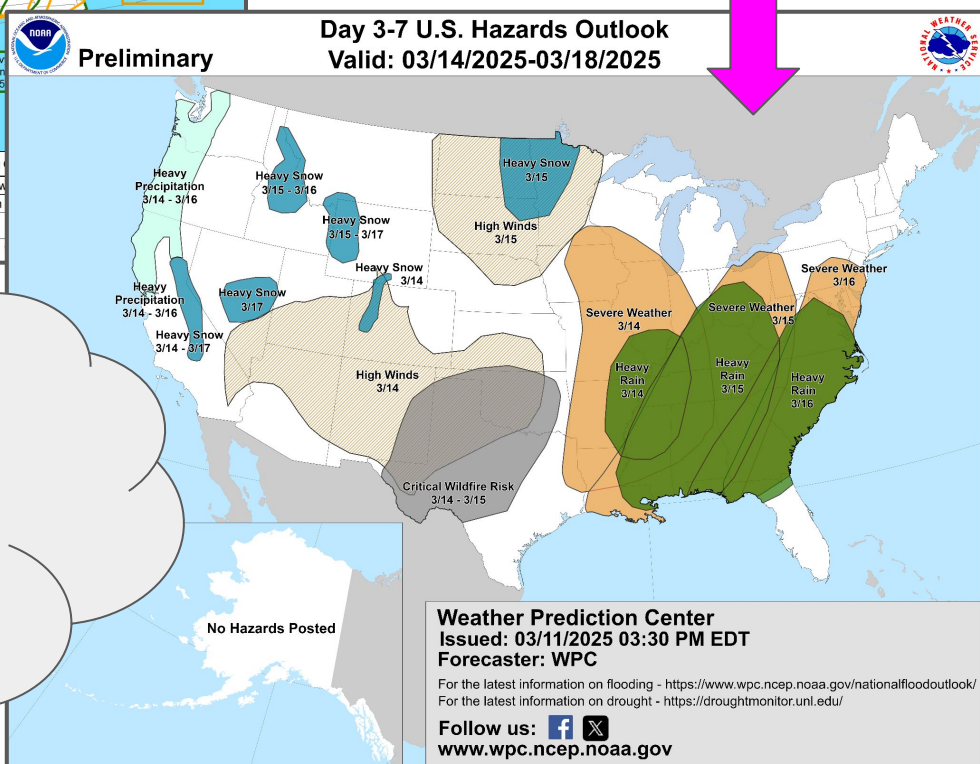

Take a look
at
What's New!

1. A new underlying basemap
2. Transitioning from outlined hazard areas to color-filled shapes
3. Label improvements
4. Removal of the flooding hazards (flooding occurring/imminent, flooding likely, and flooding possible) from the static image. Note: these shapes will still be available to toggle on the interactive map displayed on the webpage, and are also available on the Flood Outlook Product at www.wpc.ncep.noaa.gov/nationalfloodoutlook/
